**Fig.02
Basic Schematic view
of communication channels
provide by
Tracy PODS and Tracy Protect
during Emergency Relief.**

[01] The Tracy temporary network serves as a reliable communication system and a data access by general public under the affected area, reaching emergency numbers or other personal device under the affected area.

[02] Communications between survivors and 1st responder rescues text message, possibly communications and voice communication. Some low quality videos and/or procedures may be transmitted by rescue departments.

[03] The temporary network could be used to dissemination of warning for the general public on the affected area. And inform general public if they are entering the hazardous area.

[04] With Tracy Rescuer (Software) is possible to manage system, exchange communication between rescue department peers.
